

WHAT IS CLAIMED IS:

1. An OLED device comprising a light-emitting layer (LEL) containing a host and an emitting dopant located between a cathode and an anode wherein the dopant is an orange-red light emitting rubrene derivative represented by formula (I):

Formula (I)

wherein:

- a) there are identical branched alkyl or non-aromatic carbocyclic groups at the 2- and 8-positions;
- b) the phenyl rings in the 5- and 11-positions contain only para-substituents identical to the branched alkyl or non-aromatic carbocyclic groups in paragraph a); and
- c) the phenyl rings in the 6- and 12-positions are substituted.

2. The device of claim 1 comprising a further light-emitting compound to provide a white light emission.

3. The device of claim 2 further comprising a blue light-emitting compound to provide a white light emission.

4. The device of claim 2 further comprising a filter over-lying the device.
5. The device of claim 2 wherein the layer comprises a host and dopant where the dopant is present in an amount of up to 10%-wt of the host.
6. The device of claim 5 wherein the dopant is present in an amount of 0.1-5.0%-wt of the host.
7. The device of claim 1 wherein the dopant is represented by formula (II):

Formula (II)

wherein

R_1 is represented by the formula;

wherein each of R₃, R₄ and R₅ is hydrogen or an independently selected substituent with no more than one being hydrogen or R₃, R₄ and R₅ taken together can form a mono- or multi-cyclic ring system;

R₂ is a substituent group;

n is 1-5;

provided that all R_1 groups are the same; and

provided further, that the R_2 groups, their location and n value on one ring are the same as those on the second ring.

8. The device of claim 1 wherein the dopant is represented by formula (III):

Formula (III)

wherein

R₂ is a substituent group;

n is 1-5; and

provided that the R₂ groups, their location and n value on one ring are the same as those on the second ring.

9. The device of claim 1 wherein the dopant is represented by formula (IV):

Formula (IV)

wherein

W represents the atoms necessary to complete a non-aromatic heterocyclic or non-aromatic carbocyclic ring group;

R_2 is a substituent group;

n is 0-5; and

provided that the R_2 groups, their location and n value on one ring are the same as those on the second ring;.

10. The device of claim 7 comprising a further light-emitting compound to provide a white light emission.
11. The device of claim 10 further comprising a blue light-emitting compound to provide a white light emission.
12. The device of claim 10 further comprising a filter over-lying the device.

13. The device of claim 9 wherein W represents the atoms to complete a cyclohexane ring.

14. The device of claim 9 wherein W represents the atoms to complete an adamantane ring.

15. The device of claim 7 wherein R₂ is located in meta or para positions of the phenyl groups.

16. The device of claim 7 wherein R₂ are independently selected from the group consisting of fluorine, fluorine containing groups, alkyl, aryl, alkoxy and aryloxy groups.

17. The device of claim 7 wherein R₂ is phenyl.

18. The device of claim 7 wherein R₂ is fluorine.

19. The device of claim 7 wherein R₂ is a fluorine-containing group.

20. The device of claim 7 wherein R₂ is selected from trifluoromethyl, pentafluoroethyl and fluorinated-phenyl groups.

21. The device of claim 7 wherein R₃, R₄ or R₅ is selected from trifluoromethyl, pentafluoroethyl and fluorinated-phenyl groups.

22. The device of claim 1 wherein the host is an amine compound.

23. The device of claim 1 wherein the host comprises *N,N'*-di-1-naphthalenyl-*N,N'*-diphenyl-4, 4'-diaminobiphenyl.

24. The device of claim 7 wherein the substituents are selected to provide an emitted light having an orange-red hue.
25. The device of claim 7 wherein the substituents are selected to provide a reduced loss of initial luminance compared to the device containing no rubrene.
26. The device of claim 7 wherein the layer comprises a host and dopant where the dopant is present in an amount of up to 10%-wt of the host.
27. The device of claim 26 wherein the dopant is present in an amount of 0.1-5.0%-wt of the host.
28. The device of claim 1 wherein the rubrene compound is selected from the following:

Inv-1

Inv-2

Inv-3

Inv-4

Inv-5

Inv-6

Inv-7

Inv-8

Inv-9

Inv-10

Inv-11

Inv-12

Inv-13

Inv-14

29. An OLED device comprising a light-emitting layer (LEL) containing a host and a dopant located between a cathode and an anode wherein the emitter is an orange-red light emitting rubrene derivative represented by formula (I):

Formula (I)

wherein:

a) there are identical branched alkyl or non-aromatic carbocyclic groups at the 2- and 8-positions;

b) the phenyl rings in the 5- and 11-positions contain only para-substituents identical to the branched alkyl or non-aromatic carbocyclic groups in paragraph a);

c) the phenyl rings in the 6- and 12-positions are substituted or not; provided that the wavelength of maximum emission (λ_{\max}) in ethyl acetate solution is such that $563\text{nm} < \lambda_{\max} \leq 650\text{nm}$.

30. An OLED device of claim 29 wherein the rubrene derivative has a wavelength of maximum emission (λ_{\max}) in ethyl acetate solution such that $565\text{nm} < \lambda_{\max} \leq 625\text{nm}$.

31. A light-emitting device containing the OLED device of claim 1.

32. A light-emitting display containing the OLED device of claim 1.

33. A method of emitting light comprising subjecting the device of claim 1 to an applied voltage.
